

ABSTRACT

[0042] The present invention is a remove-able portable alerter for a portable wireless communication host device. The alerter provides a method to receive un-obtrusive alerts from the host device informing the user of incoming notifications. Users are informed of alerts without having to wear, hold, carry or listen
5 to alerts from the host device. The invention provides an alternative to carrying a larger, bulkier host communication device. The alerter provided greater control and manageability of incoming notification enabling them to respond to alerts at their convenience.
